

2018 UV Buyers' Guide
Manufacturer Listing Class IV – Towed and Bottom-Crawling Vehicles

Class IV – Towed and Bottom-Crawling Vehicles. Towed vehicles are pulled through the water by a surface craft or winch. Some vehicles have limited propulsive power and are capable of limited maneuverability. Bottom-crawling vehicles use a wheel or track system to move 3 ROV Classifications across the seafloor, although some may be able to 'swim' limited distances. These vehicles are typically large and heavy, and are often designed for one specific task, such as cable burial.

To include your **FREE** listing in the 2018 ON&T Buyers' Guide, complete this form and submit or email to jlewis@tscpublishing.com. (Note: Layout has been updated; all current listings must be resubmitted.)

Company information as it should be listed in the UV Buyers' Guide:

Company: _____
Contact: _____
Address: _____
City/State/Zip: _____
Country: _____
Phone: _____
Email: _____

Product Information:

Product Name: _____
Website: _____
Contact: _____
Email: _____
Vehicle can be customized: Yes No
I am submitting a PDF: Yes No
Markets Served: Offshore O&G Defense Renewables
 Environmental Science Seabed Mining
Tasks: Construction Burial & Trenching
 Intervention
Tools: Video Cameras & Variable lighting Cleaning Devices
 Acoustic and Tracking Sensors Work Tools

50-word product descriptions as it should appear in the Buyers' Guide (will be edited if guidelines aren't met):

With completion of this form, send a required image (1/product) and optional spec sheet properly titled to jlewis@tscpublishing.com.
